

Nivell® SK Series Adjustable Wedge Mounts

Nivell SK Series Wedge Mounts are designed for machines that have no mounting holes or mounting holes that are too small for vertical adjustment screw type isolators.

These anti-corrosive mounts are simply placed underneath the machine base anywhere it needs support. Mounting holes are not required! The top and bottom surfaces have non-slip nitrile rubber coverings.

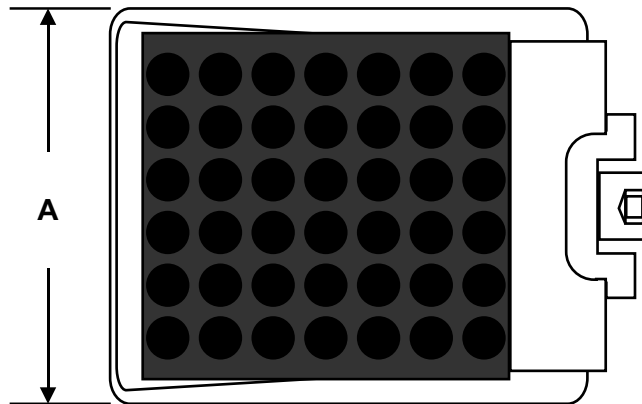

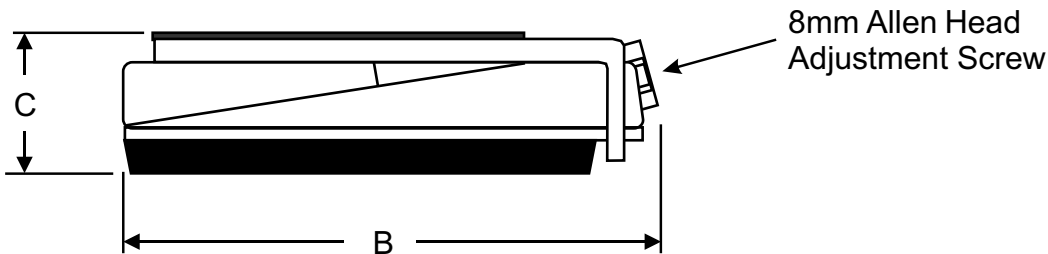

Leveling is accomplished using a horizontal adjustment screw. These screws can be adjusted without the assistance of a hydraulic jack.

Lathes, milling machines, grinders, injection molding machines, and woodworking machinery are just a few examples of the machines that can be installed with these isolators.

SK Wedge Mount Construction:

- Cast aluminum wedge assembly
- Nitrile non-slip surfaces
- Anti-corrosive plated steel.
- Black oxide, high-strength steel

Isolator Model Number	Maximum Load (lbs)	Torque at Maximum Load (ft-lbf)	Weight (lbs)	Dimensions			
				(Inches)			
				"A"	"B"	"C"	Height Adjustment
